Exam Readiness: AWS Certified Database - Specialty

```
Course#:awser-cds
Duration:1 Day
Price:0.00
```

Course Description

The AWS Certified Database Specialty exam validates technical skills and experience in designing, deploying, and managing AWS database services. This course helps you prepare for the exam by exploring the exams topic areas and familiarizing you with the question style and exam approach. The course reviews sample exam questions in each topic area and teaches you how to interpret the concepts being tested so you can more easily eliminate incorrect responses.

Objectives

In this course, you will learn to:

Navigate the logistics of the examination process.

Understand the exam structure and question types.

Identify how questions relate to AWS database concepts.

Interpret the concepts being tested by exam questions.

Develop a personalized study plan to prepare for the exam.

Audience

IT professionals (Ops/admin database)

Data platform engineers

Database developers

Solutions architects

Prerequisites

We recommend that attendees of this course have the following knowledge and experience:

AWS Certified Cloud Practitioner or an Associate-level AWS certification

Five or more years of hands-on experience working with complex database solutions on AWS

Content

The course addresses each of the exams content domains:

Workload-specific database design.

Deployment and migration.

Management and operations.

Monitoring and troubleshooting.

Database security.

This course covers the following concepts:

Testing center information and expectations

Exam overview and structure

Question structure and interpretation techniques

Deep dive into exam domains, including practice exam questions
